## Cement sampling system by D&C Engineers

---

### We designed and developed a semi-automatic cement sampler for Hinkley Point C batching plants

The system allows for 2kg samples to be taken at any time during the tanker discharge to silos without interrupting the tanker's silo blow.

The sampling control is automatic and controlled by a Zelio programmer which can be set to the customer's requirement. This allows the cement sample to be transferred into a glass chamber which can be viewed and then manually discharged into a sample bucket.

The cement sampling unit can be installed to any blow line and is normally installed just above the shut off-valve by splitting the flanges and inserting the 150mm flanged adapter.
