Small bespoke plants by D&C Engineers

Pictured here is a plant which features:

- Ten-t•20-ton capacity aggregate storage hopper and 15-ton capacity sand storage hopper mounted on supporting structure
- Back weigh system
- 600mm-wide batch belt, feeding into skip hoist
- 0.33m³ planetary mixer with two discharge doors complete with skip hoist and supporting structure
- 50-ton silo, including access to silo tops and screw feed outlets to cement weigh hopper
- All supporting structures and access
- All electrical installations, including cabling, controls and panels.

As well as the design and build of the plant, we arranged delivery to the site and took care of all installation considerations, including cranes and other MEWPS (mobile elevating work platforms) and – of course – safety.

We look forward to discussing your project:
