## Tilting hopper by D&C Engineers

---

**This system is ideal when a site is not suitable for a below-ground pit or ramp**

Our tilting unloader allows a truck to access a hopper at ground level where it can discharge 30 tons of aggregate before leaving the site. When the safety gates close the hopper will tilt from horizontal to vertical thanks to two hydraulic ramps.

Once vertical the hopper will sit like any conventional above-ground hopper, discharging via a short conveyor onto the existing plant radial conveyor.

Let us help you find the perfect solution for any site:
